Questions to understand the client's needs:

- How do you assess the cardiovascular risk of your diabetic patient?
- How could you improve the quality of life for your diabetic patient?
- How can you achieve more benefits in a patient with diabetes besides improving glycemic control?
- When is it important to reduce kidney damage in your patient?
- Why do you use a PPD-3 as first-line treatment instead of a TLGS-2 like Parexel?
- What do you consider a priority when starting treatment for your patient diagnosed with diabetes?
